4. Doctest

Module that lets you write all the test cases in the docstring of a module / function
- Docstring is written in interpreter mode format
- doctest. testmod (name = " module _ name ", verbose = True)
  → shows output of all test cases
    if not specified, only failed
    cases are shown

PYTHON DEBUGGER (PDB)

pdb. set_ trace () : Takes you to debugger prompt ; returns line of code that will be executed after this statement
